I think the discrepancy was with RO, Randy split it out between reject and use, I didn't pick up on it until just now because I evidently can't read. I corrected it in the attached word document from 105 gpm to 210gpm and adjusted the totals accordingly. Let me know.

Seth

Seth – Your numbers for the #2 and #3 Potable Wells are lower than Randy's. What is the reason for the difference.

Doug – Assuming these are our best guess estimates, you, Seth, and I should get together to discuss an estimate of what needs to be added to these numbers (if anything) for other times of higher than normal usage to arrive at the final number that we want to submit to Jeff Shafer.

Terry

Subject: Industrial Well Usages

This is what I put together with the help of Randy H. Please review and let me know how to further proceed.

Thanks,

Seth McCormick
